William Decatoire

Junior Software Engineer | Python Backend Developer

Paris, France | +33 6 58 67 59 90 | willdec93250@gmail.com
github.com/WYLLLY | portfolio-wheat-five-66.vercel.app

Python developer focused on backend APIs, PostgreSQL transactions and automated testing. Personal projects cover payment simulation, durable task execution, static code analysis and machine learning inference.

TECHNICAL PROJECTS

Personal projects

Payment & Ledger System | GitHub

Python, FastAPI, PostgreSQL, SQLAlchemy, Alembic

- Built an immutable double-entry ledger, atomic transfers and idempotent APIs with SQL constraints and deterministic locking.
- Implemented outbox workers and reconciliation against a simulated provider; tested concurrency and recovery with real PostgreSQL.

AI Task Execution Platform | GitHub

Python, FastAPI, PostgreSQL, Redis, HTTPX

- Built durable task execution with cancellation, worker leases, fencing and retained idempotency responses.
- Implemented document workflows, cost accounting and Server-Sent Events (SSE), with PostgreSQL fallback during Redis outages. Providers tested by simulation.

Fraud Detection ML Service | GitHub

Python, scikit-learn, PyTorch, FastAPI, NumPy

- Compared logistic regression and a CPU MLP on 60,000 synthetic observations, with training-only preprocessing and frozen model selection.
- Built a versioned inference API and read-only Payment scoring CLI. Experimental scores do not establish real fraud accuracy.

Python Code Analyzer | Case study

Python 3.14, ast, Typer, Rich, pytest, Ruff, mypy

- Built static import resolution, dependency graphs and iterative Tarjan cycle detection without executing target code.
- Delivered coupling metrics and deterministic JSON exports with strict TDD, 682 passing tests and independent review.

TECHNICAL SKILLS

Languages and APIs: Python, SQL, FastAPI, Pydantic, REST APIs, asyncio
Databases: PostgreSQL, SQLAlchemy, Alembic, Redis
Testing and delivery: pytest, Ruff, mypy, Pyright, Docker, Docker Compose, Git, GitHub Actions
Machine learning: scikit-learn, PyTorch, NumPy, model evaluation, API inference
Certification goals (not yet earned): GH-200 (GitHub Actions); GH-600 (Agentic AI Developer).

PROFESSIONAL EXPERIENCE

KILO Shop | Sales Assistant | 2023–2026
UNIQLO | Sales Assistant | 2021–2023
McDonald's | Crew Member | 2018–2019

EDUCATION

Bachelor's degree in Philosophy (Licence), Sorbonne | 2021
Baccalauréat STMG | Lycée Clemenceau, Villemomble | 2018

INTERESTS

Philosophy, literature, music, boxing, weight training.
