PERSONAL PROJECTS

Payment & Ledger System

GitHub

Double-entry ledger, idempotent transfers and recoverable payments; PostgreSQL concurrency tests.

AI Task Execution Platform

GitHub

Durable AI workflows with worker recovery, SSE, bounded tools and cost reconciliation; simulated providers.

Fraud Detection ML Service

GitHub

Synthetic-risk model evaluation and local inference; read-only Payment scoring, no real-fraud validation.

Workspace — Multi-Tenant SaaS Platform

Case study

Java/Spring Boot SaaS with PostgreSQL tenant isolation, versioned tasks, secure sessions and recovery tests.

ADDITIONAL PROJECTS

Python Code Analyzer — Static import graphs and deterministic reports; analyzed code is never executed.

Security Log Analyzer — In development: offline SSH-log alerts; later reporting remains under review.

Snapshot Backup Engine — Deduplicated local backups with SQLite manifests and tested interruption recovery.
